

CS 2001: Research Topics in Computer Science
Fall 2014

Mini Project

Assigned: Tuesday, October 28

Due: Tuesday, December 9

1 Background

The goal of this short project is to give you a working knowledge of AFS, Subversion (SVN), `make`, and \LaTeX . Specifically, you will learn how to create groups and manage permissions in AFS, set up an SVN repository whose permissions are managed via AFS groups, typeset documents using multiple \LaTeX styles, and control document builds using Makefiles.

2 What do I need to do?

To address the above objectives, you will set up an SVN repository to share your paper reviews with me. Given that everyone in the department has access to the shared AFS file system, this process is actually quite easy to do in practice. In particular, you will need to do the following things:

1. Create an AFS group called `cs2001.svn`. After the group is created, add yourself and me (`litman`) as members of the group.
2. Within your `public` AFS space, set up an SVN repository called `cs2001.papers`. Ensure that only members of the `cs2001.svn` group have access to this repository.
3. Read over the paper submission instructions for the 28th International Conference of the Florida Artificial Intelligence Research Society (FLAIRS) (<https://sites.google.com/a/boonthum-denecke.com/flairs-28/home>) and the 2015 Conference of the North American Chapter of the Association for Computational Linguistics - Human Language Technologies (NAACL HLT) (naacl.org/naacl-hlt-2015). Each of these conferences requires the use of a different \LaTeX template; download both templates.
4. Create two directories in your new SVN repository: `16_nov` and `23_nov`. In the `16_nov` directory, create a \LaTeX document that formats your paper review that was due on November 16th according to the FLAIRS format. In the `23_nov` directory, create a \LaTeX document that formats your paper review that was due on November 23rd according to the NAACL-HLT format.

5. In each review, the paper that you chose to review should be cited. Do not create the \LaTeX bibliography by hand. Rather, create a BibTeX file `review.bib` that includes the citation information for this paper. Your \LaTeX document should use the `\cite{}` command to include a citation to the paper defined in `review.bib`.
6. In each directory, create a Makefile with two targets: `review` and `clean`. The `review` target should use `pdflatex` and `bibtex` to build the paper review in the current directory. The resulting PDF file should include a references section that cites (at least) the paper that you reviewed. The `clean` target should delete all auxiliary files created by the `pdflatex` and `bibtex` programs. That is, after running `make clean`, the only things in the directory should be `Makefile`, your `.tex`, `.bib`, and `.cls` files.

The resulting SVN repository will allow me to download your reviews, edit them to include comments and suggestions, and commit my changes to the repository. In order to carry out the above, you may need to consult references on the course web page, the department's web page, or other places on the Internet.

3 What should I turn in?

When you have the above SVN repository set up, submit your assignment using Coursweb. Your submission must contain:

- Instructions on how to check out your SVN repository. I should be able to copy and paste these instructions directly into a command prompt to check out a copy of your `cs2001_papers` repository.
- The membership list of your `cs2001_svn` AFS group. Specifically, I expect to see a copy/paste showing the results of an AFS command that lists group membership.
- The AFS permissions for your repository. Again, I expect to see a copy/paste showing the results of an AFS command that lists the permissions on the `cs2001_papers` directory.

Your assignment must be submitted by 11:59PM on Tuesday December 9th, 2014.

4 Grading Criteria

- Checkout works: 30 points
- FLAIRS Format: 10 points
- NAACL HLT Format: 10 points
- Makefile: 15 points
- Bibtex: 15 points
- Membership: 10 points
- Permissions: 10 points
