- username = prompt("What is your name?")
 - username = prompt("What is your name?", input)
 - prompt("What is your name?", username)
 - prompt(username, "What is your name?")

II True or false questions (T for true, F for false; 2 points each, total 20 points)

1. An external JavaScript must contain the <script> tag. [Answer: ____]
2. The variable name can begin with a letter, underscore, or a number. [Answer: ____]
3. When we declare a variable within a function, the variable can only be accessed within that function. [Answer: ____]
4. The following JavaScript code prints "Good morning" to the HTML document. [Answer: ____]

```
<script type="text/javascript">
var hour = 12
if(hour < 10)
{
    document.write("Good day!")
}
else
{
    document.write("Good morning!")
}
</script>
```

5. You should use the switch statement if you want to select one of many blocks of code to be executed. [Answer: ____]
6. The following two different lines of JavaScript code are equivalent. [Answer: ____]

```
name="Hege"
name = "Hege"
```

7. If I want to convert the string "cs134" to "CS134", then I can use the following lines of JavaScript code to do that. [Answer: ____]

```
var txt = "cs134"
txt = txt.toUpperCase()
```

8. The way we declare a new string object is [Answer: ____]

```
var str = new String()
```
9. The following JavaScript code will cause an error: [Answer: ____]

```
var mycars=new Array(2)
mycars[0]="Saab"
mycars[1]="Volvo"
mycars[2]="BMW"
alert(mycars[2])
```

10. To use the “round” function of JavaScript Math object, we have to first create an instance of this object, and then call the “round” function as following: [Answer: ____]

```
var myMathObj = new Math()
myMathObj.round(4.7)
```

III Fill in the blanks. (3 points each, total 18 points)

1. The value stored in variable “x” after the following operations is _____ .

```
x = 5
x ++
x %= 20
```

2. If

```
x=5
y="5"
```

Then, “return x==y” returns _____; “return x===y” returns _____ .

3. If we have a JavaScript code as following:

```
txt1="What a very"
txt2="nice day!"
txt3=txt1+txt2
```

Then, the variable “txt3” contains _____ after all those operations.

(Be careful about the space).

4. Output of the following JavaScript code is _____.

```
<script type="text/javascript">
var i=0
do
{
document.write("The number is " + i)
document.write("<br />")
i=i+1
}
while (i<0)
</script>
```

5. Output of the following JavaScript code is _____.

```
<script type="text/javascript">
var i=0
for (i=0;i<=3;i++)
{
if (i==1){continue}
document.write("The number is " + i+"<br/>")
}
</script>
```

6. If I want to assign the following string to a variable named txt in JavaScript, the code should be _____.

They are so-called "Vikings" from the north.

IV Writing code (40 points total)

1. (15 Points) Take a look at the following JavaScript code:

```
<html>
<head>
<script type="text/javascript">
...
</script>
</head>

<body>
<form>
<input type="button" value="Click me!" onclick="displaymessage()" >
</form>
</body>
</html>
```

Now, if I want to put some code inside the <script> tag, so that when the user click on the "Click me!" button, the sentence "Welcome to my world!" will be printed out to the document (not alert box) in <h1> format. Then what should be my JavaScript code?

2. **(10 Points)** I want to use a JavaScript function which returns the maximum of two numbers. Please provide the code of this function.

3. **(15 Points)** Write a simple JavaScript program which prints out all the even numbers from 1 to 100 (use `document.write()` for printing; don't use `alert()`).
